

## FRESH-AIRE UV<sup>®</sup> COMMERCIAL SERIES APCO MODULAR RACK SYSTEM

### Case Study - Paws 4 Play

#### Fresh-Aire UV APCO Commercial Takes Care of Those Dog-Gone Odor Problems!

Commercial APCO system installed in rooftop package unit

Commercial APCO cells are still clean 1 year after installation

Paws 4 Play is a "doggie daycare" business in Jupiter, Florida. Although the facility maintains the highest standards of cleanliness it was not surprising that as the business grew dog related smells became a problem.

*"Despite daily cleaning and disinfecting the smell of dogs was a problem. We tried every type of air freshener and spray but none of them really made a difference.*

*About six months ago we were having our AC unit serviced and the technician suggested we try the Fresh-Aire UV Commercial Series APCO Rack System. The system was quickly installed and the effect was immediate and obvious. Now there is almost no noticeable dog smell and many of our customers have commented on the improvement.*

*Dogs have extremely sensitive noses and one of the best things about the APCO system is that it eliminates odors without chemicals, perfumes, or ozone - none of which are good for dogs or for humans.*

*On any given day we may have as many as 60 dogs at our facility. The APCO system has made a significant improvement to the quality of our indoor air and we would recommend this system to anyone concerned with odors in their home or business"*

Brent Orr, Owner, Paws 4 Play

In order to document the effectiveness of the Commercial APCO system, VOC air samples were taken before, one month, and one year post installation. These samples were then sent out for analysis by an independent laboratory. The results confirmed a significant reduction in odor molecules or volatile organic compounds (VOCs).

#### TOTAL VOCs

#### Reduction In Airborne Volatile Organic Compounds

Manufactured by Triatomic Environmental, Inc.
